HIGHLIGHTS

ISTHAR LED

The ISTHAR LED is a slim contemporary luminaire available from Spectra Lighting. This high performance fitting provides functional lighting, making it ideal for a variety of indoor and outdoor applications from general lighting to highlighting architectural features and building facades. Manufactured from corrosion resistant and 96% non-flammable material, the ISTHAR LED features an IP66 protection rating, is low maintenance and quick and easy to install. A range of mounting accessories are available to best suit your project's application. The ISTHAR LED has a low surface temperature and delivers energy efficiency through light emitting diodes (LED). Efficient low maintenance LED HP versions and LED RGB colour changing luminaires are available, with the latter ideal for creating dramatic colour lighting effects. The LED HP high power versions are supplied complete with LED driver and internal cable as well as terminal blocks for through wiring connection. The LED RGB colour changing requires an appropriate RGB supply and control unit. These are supplied as accessories and need to be ordered as separate items in addition to the fitting. The ISTHAR LED combines high efficiency with contemporary design to create this stylish luminaire. Ideal for general area commercial lighting, retail lighting, modern and historical interiors, museums, exhibition and signage lighting, it will make you next project shine.

Australia's First Tubular Daylighting Device

Solatube's Brighten Up series is set to revolutionise the future of solar lighting in Australia with improved built in energy efficient benefits. Engineered for optimum performance, the Brighten Up series is an innovative daylighting system providing controllable, consistent and comfortable daylighting suitable for residential, retail or commercial application. The system combines Solatube Commercial's patented LightTracker™ Reflector and Raybender® 3000 Technology to capture light through a UV filtering dome and redirect low angle light. The Brighten Up Series is unique in terms of where it can be installed; featuring adjustable tubing with angle adaptors allowing the device to be installed around any obstructions, while still retaining optimum lighting performance. The Designer Touches range provides a selection of trim styles, diffusers and effect lenses, allowing the system to be customised to match the aesthetics of any environment. Optional lighting and ventilation add-ons, including a daylight dimmer, take the daylighting system to the next level and give consumers complete control over light levels throughout the day into the night.
