

Daylight Dilemma

Bathroom

PROBLEM

This bathroom made a dramatic statement, but for all the wrong reasons; it was very dark.

Windows which backed onto a neighbour's wall, provided insufficient natural lighting for the space, requiring the homeowners to rely on electric lights even during the daytime to provide adequate lighting, particularly over the bath and vanity areas.

The homeowners hoped to bathe the room in natural light, providing a serene and spa-like retreat.

SOLUTION:

Two 250mm Solatube's were installed over the vanity and bath areas.

This provided plenty of soft natural lighting for the entire room as well as task lighting over the vanities themselves.

The whole room was transformed into a much brighter, more uplifting and useable space.
