

Daylight Dilemma

The Walk-in Robe

PROBLEM

This walk-in closet provided ample storage space, but was poorly lit.

The homeowners found it difficult to locate items in the drawers and cubicles or to distinguish between colours on clothing and shoes.

They desired to have a brighter, better functioning space filled with plenty of natural light.

SOLUTION:

The solution involved installing a 250mm Solatube in the centre of the closet area.

The natural light was diffused evenly throughout the space, lighting all the way into the corners.

Best of all, the light was clean and white, offering true colour rendition, unlike fluorescent lighting.
